

2023 Alumni Association Golf Tournament Proceeds

After discussion with the District Administration, proceeds from the 2023 Golf Tournament were presented to both the **Technology/Education** and **Agricultural Sciences** Department programs.

Technology Education Department received funds to be used to purchase a series of automatic blast gates which will improve air quality in the shop area which serves over 600 students per year. The new blast gates will automatically close when machines such as planers, sanders, and saws are turned off thus increasing air flow and provide students and faculty a safer work environment.

Agricultural Sciences Department received funds to provide for an engine upgrade/replenish kit for the Briggs & Stratton small engine training module used to instruct students in both the Ag-Shop and FFA programs small engine repair. The upgrade/replenish kit contains 10 engines, tools, and gaskets.
